Wedge Conveyor

Wedge Conveyor

FlexMove wedge conveyors are used to convey products from production floor level to another level higher or vice-versa using FlexMove wedge top chain. It uses two conveyors facing each other to provide fast and gentle vertical and/or horizontal transport of products. Its proven function provides a continuous high capacity operation, never requires the product to be stopped and ensures product separation.

FlexMove®

Rinse Module

FlexMove wedge conveyors are also used in rinsing application where products need to turn up side up for rinsing process. There are many configurations of wedge conveyors such as "C", "S", "U" or "n".
